

COMFORT ANTI FRICTION CREAM

COSMETIC ADJUVANT IN THE SOOTHING TREATMENT OF THE SKIN.

DURING

RECOMMENDED FOR

FOR EVERY SPORT

- cyclists who want to prevent groin rub problems
- Runners who have friction problems

INFORMATIONS

Friction, rubbing, sports trauma can lead to the formation of sores and redness on the skin. These conditions quickly compromise the performance and physical integrity of the athlete and should therefore be prevented or treated.

FEATURES

Comfort is an antifriction cream with soothing, emollient and anti-friction properties. It is suitable for athletes subject to easy redness or skin injuries during sports. Suitable for parts in contact with the saddle for the cyclist, for areas of intense friction for the runner and in general for areas subject to epidermal trauma for the athlete. The special composition of the cream protects the skin from abrasions generated by the repetition of the sporting gesture and significantly reduces redness from rubbing. The high content of zinc oxide exerts an effective soothing and epidermal protection.

INDICATIONS

The cream is indicated to protect and soothe the skin from redness, abrasions or sores as a result of trauma from friction or rubbing.

HOW TO USE

Apply to areas subject to redness before starting the sport, massaging gently. In case of persistent redness repeat and continue the application for a few days.
